

Nepal Project Site Name 1997 to 1998 Gotvangan

The standard fog collector was located about 8 to 10 km southwest of the town of Gotvangan. At the time, there were some previous years of meteorological data recorded in Gotvangan. The elevation where the meteorological measurements were made was 1400 m above sea level.

The SFC was located in the village of Gotvangan in the Dalchowki VDC (village development committee That). There is no village nor VDC nor region called Talchowki. Where you see Talchowki in the early reports, it is meant Dalchowki in reference to the site located in the village of Gotvangan in the Dalchowki VDC. This clarification was provided by François Vitez, CECI.

Dalchowki is presumably Dalchoki about 5 km south of the southern edge of Kathmandu.

These notes were prepared by Robert Schemenauer on 05 February 2024, from older correspondence in the FogQuest project files.
